

Cellulose Insulation

— GREEN IDEA INSULATION —

R-3.5+

APPROX. PER INCH

~85%

RECYCLED CONTENT

Class 1

FIRE-RATED MATERIAL

KEY BENEFITS

Excellent Air Sealing

Dense-pack cellulose packs tightly into cavities, filling gaps and slowing air movement far better than loose batts.

Eco-Friendly & Recycled

Made primarily from recycled paper fiber, cellulose has one of the lowest environmental footprints of any insulation.

Fire Resistant

Treated with borate compounds, cellulose achieves a Class 1 fire rating and also resists mold and pests.

Superior Sound Control

Its dense, tightly packed fiber structure is highly effective at dampening airborne noise between rooms and floors.

Strong Thermal Performance

Fills irregular spaces completely, reducing thermal bridging and helping maintain consistent indoor temperatures.

Cost-Effective Retrofit

Blown-in cellulose can be added to existing walls and attics without major demolition, making it ideal for upgrades.

R-values, coverage, and settling depend on application and density; ask your estimator for project-specific specs.

DENSE-PACK

Blown at high density into enclosed wall cavities, floors, and slopes. Resists settling and delivers excellent air sealing and sound control in finished or retrofit spaces.

OPEN-BLOW

Loosely blown over open attic floors to a target depth for fast, even coverage. A cost-effective way to reach high R-values in accessible, unfinished spaces.
